

ACRYLIC SEALANT

DESCRIPTION

WALLBERRY Acrylic is a water based general-purpose, paintable sealant that is used for caulking, grouting, jointing and embedding in building construction. It is easy to apply and compatible with most materials used in construction e.g. concrete, wood, brick, natural and artificial stone, metal and sanitary-ware. WALLBERRY Acrylic is flexible and resists cracking, giving a smooth finish that is suitable for interior and exterior use. WALLBERRY Acrylic has a VOC of 138g/L. TM

APPLICATIONS

WALLBERRY Acrylic is ideal for sealing low movement joints, as a flexible crack filler before painting jobs, for sealing construction frameworks e.g. between window and door frames and walls. Also suitable as an adhesive for bonding.

ADHESION

WALLBERRY Acrylic exhibits good primerless adhesion to concrete, plaster, brick, stone, masonry, aluminium, glazed tiles, metals, painted surfaces, coated or uncoated wood and some plastics. If there is any uncertainty regarding the application, adhesion tests should be carried out.
